

VerTmax Telescopic Pole Assembly is made of 6061-T6 Black Anodized Aircraft Aluminum Tubing which makes the pole light-weight, compact, and corrosion resistant. The VerTmax can be adapted to fit into most existing RHIB deck sockets or can be hand-held for swim-team operations. The VerTmax reservoir has a service pressure of 2,000 psi/ 140 Bar of compressed air, with adequate volume to extend the pole multiple times between recharging.

The ALM is the NEW Generation high performance line-throwing appliance specifically designed to deploy a line only, a grappling hook & climbing line, or a grappling hook & ascending ladder to an otherwise inaccessible point in both land-based and surface and subsurface maritime environments.

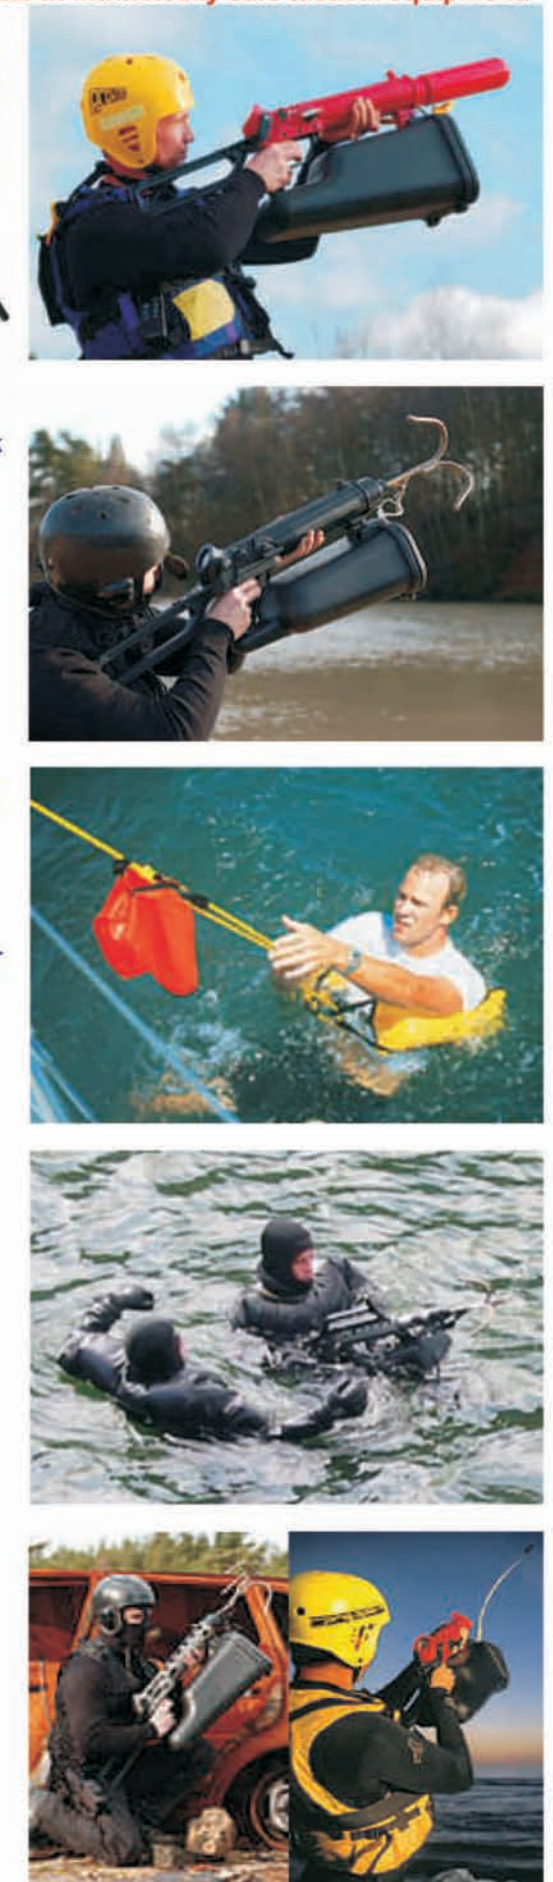

The ResQmax is a new generation line-throwing appliance specifically designed to deploy a line only, or an auto-inflating flotation sling & retrieval line to an otherwise inaccessible point in both land-based & maritime environments, providing an emergency response capability without putting the rescuer at risk.

Ledger Hooks & Accessories

"The Global Leader in intrinsically safe tactical equipment."
